Mitsubishi Electric is launching the new Ecodan system with guaranteed heating down to -28°C

Even though the spring sun is shining outside, Mitsubishi Electric is getting ready for a bitterly cold winter and is launching its new Ecodan air/water heat pump. In addition to better comfort and straightforward energy monitoring, it now provides guaranteed heating down to -28°C , perfect for our Nordic climate!

The quiet, efficient and environmentally friendly Ecodan heating system saves you money by providing maximum heat for minimum energy consumption. Mitsubishi Electric's proprietary system is now even more efficient. Thanks to Mitsubishi Electric's Zubadan technology our latest updates mean that the Ecodan system provides heating even in the bitterest of winters. This revolutionary technology gives us constant heating down to an outdoor temperature of -15°C and guarantees heating down to -28°C . Cold winters are no match for Ecodan!

Our latest Ecodan air/water heat pump also provides the user with increased comfort, thanks among other things to "Auto Adaption", which heats up the system more quickly than the previous Ecodan model. Direct on-screen energy monitoring shows you clearly how much energy you are using for heating. This allows you to easily keep track of your finances. Using MELCloud, Mitsubishi Electric's latest app, you can still control your heating directly from your smartphone, PC or tablet, no matter whether you are at home or on the move.

Ecodan is part of Mitsubishi Electric's air/water range. With an all-in-one Ecodan tank you can produce water-borne heating for radiators, underfloor heating and hot water. If you already have an existing water tank that you want to keep, you can connect a Hydro-box system to it, keeping all of the advantages of the Ecodan system.

Mitsubishi Electric is a global leader in the research, manufacturing and marketing of electrical and electronic equipment used in communications, consumer electronics, industrial technology, energy and transportation. Its head office is located in Häggvik, north of Stockholm. The company also has offices in Gothenburg and Lund.

The company has operated in the Nordic region for 30 years and has 50 employees. Mitsubishi Electric Scandinavia is responsible for sales and the support of its own products in Sweden, Norway, Finland, Denmark and the Baltic states.
