Mitsubishi Electric launches its Large Hydrobox – two functions in one initial investment

Mitsubishi Electric is launching its new product in the air/water range – the Large Hydrobox. A larger, more powerful Hydrobox for commercial properties.

The quiet, efficient and environmentally friendly Ecodan heating system saves you money by providing maximum heat for minimum energy consumption. Our latest product, the Large Hydrobox, provides the opportunity to install and customise optimal energy-saving refrigeration and heat pump systems.

The Large Hydrobox replaces oil, electric or district heating, and as a bonus it has a cooling function – so two functions in one and the same initial investment. Thanks to the unique Zubadan inverter technology, heat output is maintained down to an outdoor temperature of -15°C and the unit can easily cope with extreme winters, with guaranteed heating down to -28°C.

But there are additional advantages to the Large Hydrobox. With its high SCOP it has an energy rating of A⁺⁺ (A) and has energy metering directly in its display and via Wi-Fi or Modbus. Using Mitsubishi Electric's calculation program, MELcalc, you can carry out energy calculations for the system.

Mitsubishi Electric is a global leader in the research, manufacturing and marketing of electrical and electronic equipment used in communications, consumer electronics, industrial technology, energy and transportation. Its head office is located in Häggvik, north of Stockholm. The company also has offices in Gothenburg and Lund.

The company has operated in the Nordic region for 30 years and has some 60 employees. Mitsubishi Electric Scandinavia is responsible for sales and the support of its own products in Sweden, Finland, Denmark and the Baltic states.
